

Gas Burning Stoves

WITTUS
FIRE BY DESIGN

History and Design

Helex, established in Holland in 1964, is the vanguard of contemporary European heating design. Inspired visual design concepts plus cutting edge technology translate into highly efficient gas stoves with tall, attractive flames and sleek, sophisticated surrounds.

Technology

The direct vent Hi-Fire series gas stoves (Sueno, Color, Estilo, Ligerio, and Esfera) and the FlatFires utilize standard $6\frac{5}{8}$ " chimney systems and can be vented vertically through a roof, or horizontally out an exterior wall. Natural gas or propane.

They come with the new universal Maxitrol e-flame remote electronic ignition and control system, which is radio frequency operated and battery powered. An acoustic signal followed by a visible pilot flame assures a proper start. Fingertip control of flame height and heat. In addition, it features a remote temperature sensor, a full timer function, and a manual override function (if out of power and batteries).

The direct vent gas stoves meet the US Ansi Z21.88 and the Canadian CGA 2.33 standards, and to insure quality and safety, Helex develops and tests its products in their own state-of-the-art laboratory.

FIRE BY DESIGN

Sueno — Future Perfect

Winner of the 2006 top Platinum ADEX award for design and innovation.

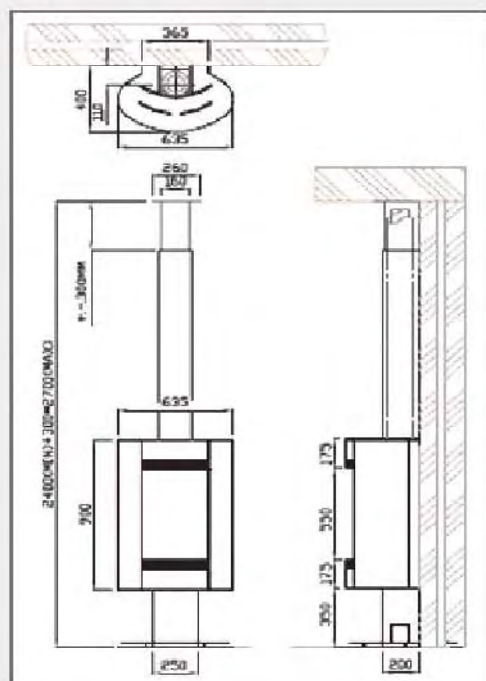

The Sueno direct vented gas stove has been cleverly fashioned so it may be used "freestanding" on its pedestal, or installed flush against the wall to give it a "built-in" appearance. Top or back-vented. You can also opt for the telescoping pipe cover that gives the unit a beautifully finished appearance when used with vertical flue systems.

Features a futuristic elliptical shape. The Sueno comes with a sophisticated, remote control unit: there's a timer, flame height and temperature control, remote temperature sensor, and manual override.

The gently bowed viewing window is enormous...nearly 22 inches tall; and the artfully hand-detailed fire logs are remarkably true-to-life. Measures 35½" high x 25" wide x 16" deep.

Propane or natural gas. Heats up to 20,000 BTUs; about 800-1,000 square feet.

Color and Estilo

Color and Estilo — Warm and Sleek

These two gracefully proportioned direct vent models are perfect choices if you appreciate compact fireplace/stoves that generate comforting warmth along with an understated sense of style.

The Color model is black steel with a small lip on the top and the bottom, and is flanked by rich, brownish red side panels. Warm and cozy, it brightens any room.

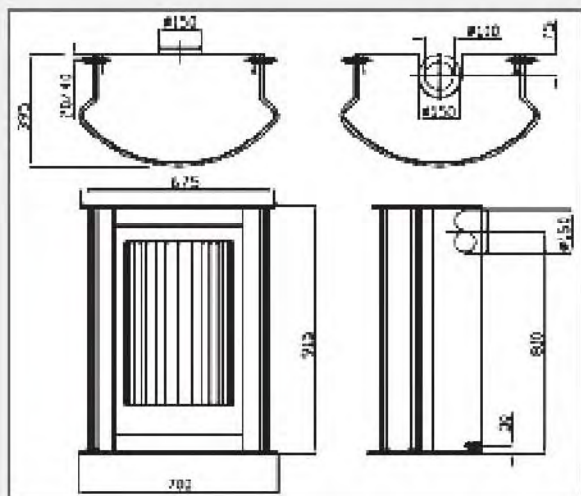

The Estilo is the same design as the Color, except that the side panels are metallic with a soft brushed patina. Sleek, elegant and contemporary.

Included is the remote control which has a timer, and it also enables you to adjust both the flames and the temperature. There is also a manual override.

The outer dimensions are 36" high x 27½" wide x 15½" deep. The gently bowed viewing window is a dramatic 22 inches tall.

Designed to be used free-standing: top or back-vented. Hand-detailed fire logs.

Propane or natural gas. Heats up to 20,000 BTUs; about 800-1,000 square feet.

Ligero — The Shadow Box

Ligero has a sculptural shadow box effect that could well be classified as "trompe l'oeil". It appears to be built into the wall when, in fact, it's simply a clever play of light and dark panels that creates the illusion of depth and "fools the eye".

This direct vent model can be ordered four ways: as a wall mounted unit, with a coordinating pedestal, with a telescoping stove pipe cover – or with both the pedestal and the pipe cover.

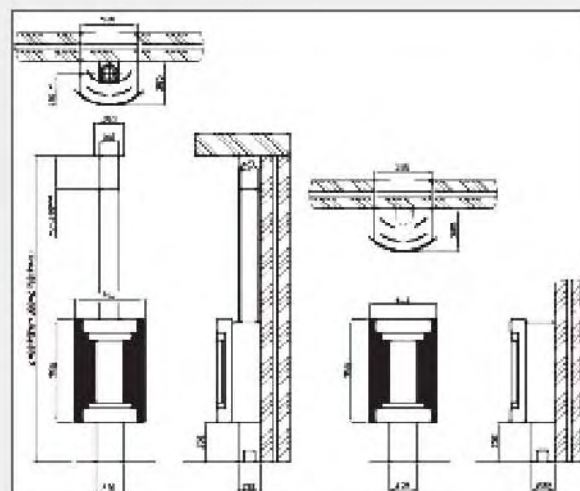

Ligero comes with a thermostatic remote unit that controls on and off features and stove temperature. The remote also has a temperature sensor, full timer function and manual override.

The convex viewing window measures 22" tall, affording a spectacular view of the realistic logs and fascinating flames.

Matte platinum finish with ebony accents. The Ligero measures 35½" high x 24" wide x 15" deep.

Propane or natural gas.

Heats up to 20,000 BTUs; about 800-1,000 square feet.

Esfera — Recessed and Refined

The minimalist approach to home fashion allows maximum decorating scope.

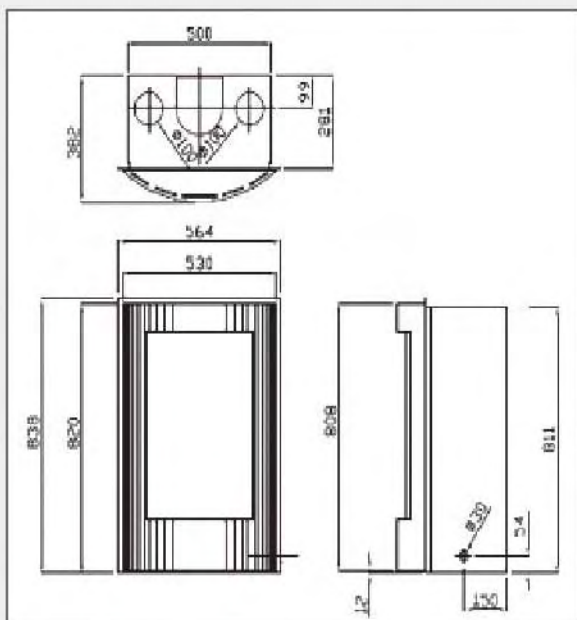

The Esfera is our direct vent recessed fireplace/stove that extends just 4" into your living space. It returns the favor by offering a most beautiful view of lively flames dancing amid very realistic examples of faux firewood.

Each fire log is painted and finished by hand to give it an individual "weathered" look that is natural and aesthetically appealing.

The Esfera comes with a multi-function thermostatic remote unit that controls on and off features and stove temperature. The remote also has a temperature sensor, full timer function and manual override.

Esfera measures 33" high x 22" wide. It's viewing window is an impressive 22" high. Matte platinum finish with ebony accents. Top or back vented.

Propane or natural gas. Heats up to 20,000 BTUs; about 800-1,000 square feet.

FlatFire — Ribbons of Flame

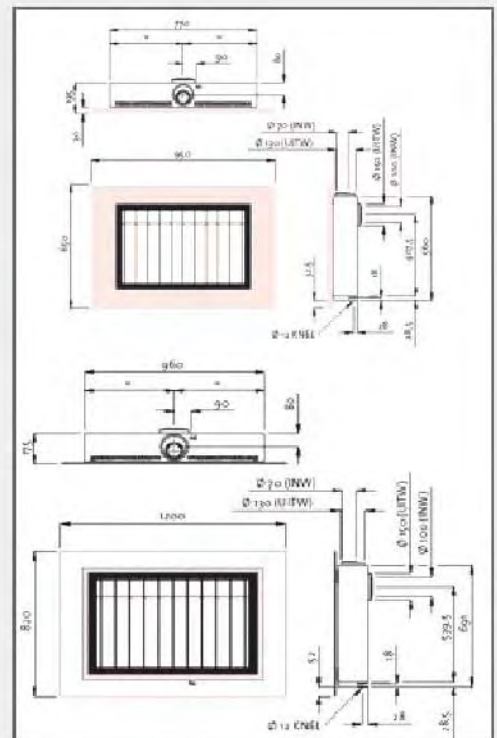

New landscape shape, well appointed options, a wide window for viewing the mesmerizing fire as it modulates up and down along a singular, fiery row called a "Ribbon Flame".

You can choose white, black, or clear tempered glass stones as accents. There are three installation formats: the FlatFire can be set in the wall as a recessed model, hung flush to the wall on a decorative bracket, or you can house it in a mantle surround.

The direct vent FlatFire can be top or rear vented. Choose either a clear glass or stainless steel frame. Propane or natural gas. Comes with a multi-function thermostatic remote control.

Available in two sizes: Medium (37" wide x 26" high) heats up to 24,000 BTUs; about 1,000–1,200 square feet.

The XLarge (47" wide x 32" high) heats up to 31,000 BTUs; about 1,200–1,400 square feet.
