Ring in the New Year with Wittus

The New Year will be here before we know it. Wittus would like to wish all of our dealers the best. It's the perfect time to reflect back and think of how to make the next year more prosperous, make changes where needed and choose new products to make your showroom shine brightly in 2019. Check out our new website www.wittus.com for more info and news.

Wittus Brings E-Stove to America

Thermoelect's E-stove is a very promising source of heat. The E-stove will be participating in the Wood Stove Design Challenge at the National Mall in Washington, DC November 9-14. The goal of the new stove is to produce enough energy for a 24-hour period with a mean value of 100 watts (up to a maximum of 250 watts). Connecting the stove to a home's hydronic heating system and distributing heat to other rooms is in the future. How the stove works: the team uses a radiator with the TEG, which is installed in the stove and uses a pump to send the water into the homes heating system. The stove runs on a large battery which

is designed as a back-up power source for the home. The goal of Wittus and their team partners is to work with wood burning stoves to create more efficient, clean, and affordable energy. Stay tuned for competition results, www.forgreenheat.org.

Using the Wittus Dealer Login

The Dealer Login is a wonderful tool that is always available on the Wittus website. We have made it so easy for you to access all that you need as a Wittus dealer. Order brochures, view price lists both retail and dealer, find product support tools, and review Newsletters for all the latest products. Go to our website (bottom center on any page) and click on the Dealer Login. The password is "fire".

Stove News

One Stop Shopping with Style

"An old-fashioned fireplace isn't only an inefficient heating source, it can also create high levels of smoke inside and outside the home. But an energy-saving wood or gas insert lets you transform your existing hearth into a super-efficient heater that can cut your energy bills by as much as 40%".

~Leslie Wheeler HPBA

Phenix Green Fireplace

Warm your home efficiently with a Phenix Green zero clearance fireplace. The latest technology includes a retractable door which allows the user to admire the fire

with the door open or closed. The efficiency ranges from 76% - 82% with exceptional heating power. The Phenix Green series stand out as a contemporary built-in fireplace that allows for maximum fire viewing, high efficiency, and high-quality standards. See what's available on our website.

Optifire Zero Clearance Insert

The Optifire zero-clearance wood burning fireplace is a practical, contemporary heat source. Powerfully heating up to 50,000 BTU's. The Optifire has an automatic thermostat that can be used for regulating heat output.

There is an optional variable speed fan to circulate warm air throughout the room. What a great solution for a secondary heat source!

The Wittus Website has a New Look!

Over the years our business has changed as we have transformed and grown. Wittus is pleased to introduce our new website.

We felt our brand needed to be represented in a more contemporary way, and we think the new site does just that. Join us in celebrating our new website and see what's new for the New Year!
