Square but not "Square"...

Design "Inside" the Box with the Cubic Series

Six unique models of varying sizes make the Cubic collection one of the most appealing wood burning products of our generation. Designed with a dream in mind of making "a stove that was much more than just a stove", the Danish architect Anders Nørgaard has achieved this goal with the Cubic series.

The Cubic's contemporary lines offer a creation that is diverse and design worthy, making it one of the most desirable stoves available. All models utilize a firebox that is highly efficient, EPA certified and UL/ULC approved. The Thermal "air wash" system self-cleans the glass fire door re-enforcing the Cubic's character as a modern delight. The six versions include: Cubic 215 – 7' high; Cubic 166 – 51/2' high; Cubic 109 – 31/2' high; Cubic Corner; Cubic Wall; and Cubic W200 – 61/2' long with side wood holder. This "fire tower in a box" offers storage, warmth and great design all in the same neat package.

Along with its fashionable looks, design features such as the concealed door handle, has finger-tip control for easy opening and closing. The burning system designed with high fuel efficiency provides higher combustion temperatures and lower atmospheric emissions. Hang it on the wall, place it in a corner or in the middle of a room for utmost viewing pleasure and keep warm while you enjoy.
