Modular Concepts...

Passionate Design

Based on the concept of modular components, Stack stoves incorporate sections that are “stacked” on top of each other. These beautiful stoves are hand crafted by La Castellamonte and developed by Turin Studio Adriano Design of Italy. In 2010, this team of creative thinkers began reinterpreting the ancient form of “Castellamonte” the art of the fire clay stove, and combined it with their passion for the Italian ceramic stove. Keeping with tradition, a special clay extracted from local caves is used specifically in their construction. The ceramic coating is prepared using traditional glazing methods but incorporates today’s technology in the process. The end result is a remarkable piece of “working” art.

Currently available in four base models of the Round Stack: Slim, Rim, Long, and Wood (shown), and two heights 45”h & 54”h. They come in a variety of vibrant colors with a finely polished stainless steel door and can be paired with classic or modern home furnishings. The stove’s burn system uses a unique ceramic baffle plate to meet smoke emission requirements and has the option of a thermos-stack tower which helps to distribute the heat. The design of the Stack stove puts the concept of environmental protection and energy savings in the forefront.

These elegant stoves are the recipient of the ISH Design Plus award in 2011 & 2013 and the ADI design Honorable Mention of the Compasso d’Oro in 2014, and they are an icon of contemporary design.
