

1 STYLISH AND MODERN

Enhance a room with twice the fire with the double-chambered Twinfire that offers beauty and efficiency combined in one stove. Four Twinfire style options are available. The Basic measures 48 inches high, 18 inches wide, and 16 inches deep. The Classic is 52 inches high, 22 inches wide and 16 inches deep. The Elegance is 50 inches high, 19 inches wide, and 16 inches deep, and the Pur [see photo] measures 51 inches high, 19 inches wide, and 16 inches deep. There are multiple options for each stove's side panels, handles and base, which allow the designer to create a signature piece unique to each home. All Twinfire models utilize the unmatched patented combustion system for 93% efficient wood-burning capacity and are EPA certified and approved to UI/UIC standards.

2 LINEAR FIREBOX

Fireboxes with a dramatic horizontal aspect ratio have long been popular in Europe and among the particularly design conscious in North America. Owning one has mainly been the privilege of those who could afford a custom installation. Dimplex has now introduced the 50" Linear electric firebox accessible to homebuilders.

The 50" Linear creates a striking impression with its wide span of the patented Dimplex flame effect and its legendary realism. To complement the spectacular flame, the 50" Linear uses a media bed of semi-silvered glass pieces

that are illuminated from below, producing an enchanting, pulsating glow. The result is a thoroughly modern appearance balanced with a warm and friendly ambience. Use of the built-in heater is optional so you can enjoy the 50" Linear's captivating atmosphere 365 days a year.

3 COLORED FIRE

R.H. Peterson's Real-Fyre's Contemporary Alternatives Series featuring Crushed Fyre Glass and Fyre Gems are a unique addition to any modern fireplace or outdoor fire feature. Fifteen distinctive colors in each the glass and the gems create a luminous and dazzling hearth. Six of the glass colors have a reflective finish creating a fiery, mirrored look. Select single or multiple colors to enhance your hearth or outdoor fire feature. The Fyre Gems and Glass can be used as a contemporary alternative to vented gas logs, around an existing gas log set, in wood-burning fireplaces, or for patio and landscaping use.

4 VENT-FREE DESIGN

Spark Modern Fires continues to innovate with Vent Free Vu Thru, its most versatile and beautiful fireplace yet. This new model is the industry's first vent-free gas fireplace that is open on two sides and features a state-of-the-art burner that yields a gorgeous flame and provides one of the cleanest-burning fireplaces in its

category. Its vent-free construction provides designers with unmatched flexibility as it will now be possible to place a see through fireplace in a location where there is no chimney or vent to the outside. The new fireplace also includes the latest electronic ignition that assures high reliability and safety as well as the "greenest" solution for a gas fireplace.

5 GREEN AND RADIANT

The unique Tulikivi soapstone masonry heater provides clean combustion that boasts emissions levels below regulations, its use can offset the carbon footprint, and because it is fueled by a renewable energy source, it is a green heating alternative. The radiant heat provided by a Tulikivi is more energy-efficient than the convection heat of a traditional wood stove. Two natural resources, soapstone and wood bring natural warmth to life. Radiant heat from a Tulikivi masonry heater provides fresh and comfortable warmth, not the burned and dry heat produced by convection heat in traditional wood stoves. Tulikivi provides a "green" cost-effective heating solution because it uses less wood to heat the same space than with a traditional wood stove. Tulikivi stores heat in the thermal mass of the soapstone; therefore a two-hour burn can radiate heat for up to 24 hours, producing clean, comfortable, cost-saving warmth.
