Biofire Fireplaces

Enjoy a Biofire fireplace in any room without the need for a chimney. These new fireplaces burn biofuel* which produce lively dancing flames. The fire can be adjusted. The fuel is housed in a polished high-grade stainless steel liter sized firebox. Biofire Fireplaces are 100% efficient and produce up to 20,000 BTUs.

Great for apartments or condos, they weigh 160 lbs and can be easily moved. Safe, easy, and beautiful, Biofire fireplaces are convenient and less expensive than traditional fireplaces. The mantel is made of wood and MDF. A stainless steel lighting tool and 3 ceramic logs are included.

The fireplace burns for about 2-5 hours without a refill. While burning, no smoke or odor is emitted; only steam and CO₂ (same as 2 candles burning). This 90%+ pure ethanol produces no ash or solid remains. The fuel cost averages less than \$5/hour, and there's no dirt or mess, no dangerous sparks, etc. Biofuel can also be purchased from a variety of online retailers.

The David and Sacramento come fully assembled and ready for use.

*Biofuel is made from renewable agricultural produce (such as corn, sugar beets, fruit, potatoes or grains). Because of the 100% fuel efficiency, renewal resource, and lack of smoke, it is an environmentally friendly way to heat a room.

Specifications		
Model	David	Sacramento
Finish	White	Teak or Pine
