FIRE BY DESIGN

Phoenix and Firebird

The Phoenix and Firebird grills are created by the award winning Danish architectural designer Bent Falk. They can be used either as outdoor fireplaces and barbeque grills or simply enjoyed as outdoor sculptures.

Both the Phoenix and Firebird are made in the USA of cor-ten steel - known for its long life span and durability. They arrive with a brilliant silver gray finish, but will soon take on a look of their own as the oxidizing starts to take place. Each unit has unique patina, and will turn a bronze color and add excitement to any special back yard or garden. Also, the cor-ten steel coating protects the inner steel and makes it maintenance free for years and years to come.

The shape of the grills form a chimney-like effect that creates a strong natural draft that allows you to build faster fires. The smoke is "funneled" up and away from the chef and any nearby guests.

The grill racks are made of heavy, 5mm stainless steel rods and can be adjusted to 4 different height levels as desired. The innovative design features stay-cool handles, and the Firebird has a unique solid stainless steel surface in the back area for warming, using as a griddle, simmering sauces, or sautéing vegetables. (The Firebird rack is shown to the right and the Phoenix rack is at the bottom right.)

Both the Phoenix and the Firebird come with removable stainless steel stakes so you can secure them on the lawn or at a beachfront location. And when winter rolls around, light up a roaring wood fire and enjoy a warm gathering place après skiing, skating, or sledding. At night these unique shapes take on a special look and provide a romantic cozy setting with friends.

Phoenix (shown on the front and back covers)

Winner of the 2008 Platinum ADEX Award for design and innovation. Tall, elegant, and conical the Phoenix grill measures an impressive 6' 3" high, 24" wide, and 20" deep. It weighs 220 pounds.

Firebird (shown at the top right)

Cylindrical, strong, and versatile the Firebird grill has two settings for the firebox tray. The upper position is used for grilling, and by lowering the tray to the bottom position, you can make a traditional campfire. The Firebird measures 4' 3" high, 19" wide, and 19" deep, and it weighs 160 pounds.

Garden sculpture by day; dramatic lighting by night. Nothing sets the mood like flaming torch pillars standing tall against a starry sky. Designed by the award-winning Danish architectural designer, Bent Falk, they turn a simple backyard gathering into an event, add flair to a restaurant entry, and bring romance to intimate dinners al fresco.

The Star and MiniStar are all made in the USA of heavy gauge cor-ten steel topped with stainless steel fuel wells that conceal the gel can. Over time natural oxidation transforms the base into a unique rich patina that protects the steel core.

Gelfire Pillars burn 2 to 3 hours per filling. The fuel is odorless, clean-burning and produces lively, lofty flames. The Pillars come with an initial supply of gel fuel. Refills are available in 13 oz. pint cans and 30 oz. or gallon bottles.

Winner of the 2008 Platinum ADEX Award for design and innovation.

Nearly 5' tall, the Star Pillar and the matching 3½' MiniStar Pillar transform decks, backyards and summer cottage beachfronts into welcoming outdoor living spaces. Use one to anchor a garden, another to illuminate the gazebo.

The 3D star cutout casts intriguing shadow patterns throughout the day, and when the stars do come out, your evening's just begun. The Star weighs 120 pounds and the MiniStar 50 pounds.

Picture the Pillars in pairs flanking a walkway or strategically placed in multiples around the pool or patio. Match up the Gelfire Pillars - the sky's the limit!

A photograph of a man and a woman standing on a grassy bank next to a calm lake at dusk. They are holding wine glasses and looking at each other. To their left is a large, dark, A-frame wood-burning fireplace with a fire burning inside. A pile of logs sits at its base. In the background, a small boat is on the water, and a forest of trees is visible. A red diagonal graphic element covers the top right corner of the image.
