# WITTUS®

FIRE BY DESIGN

Nothing can compare to a love of home and hearth. Since 1978, Niels Wittus has nurtured his company, believing in the products, quality, and the beauty and joy these stoves and fireplaces bring.

The essential ingredients are: artistry, technology, and environment.

**Artistry** — Produced in Europe, the award-winning fireplaces and stoves have combined the most up-to-date automated manufacturing techniques with hand craftsmanship. Unique and original, a revolutionized Fire by Design.

Top quality steel, special glazed ceramic, and fine soapstone are used in the construction. The finished products are the highest quality and long lasting.

reddot design

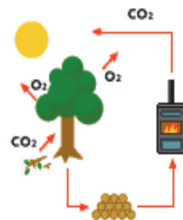

**Technology** — Behind their beauty, lie sophisticated, advanced burning systems, which have set new standards in the field of wood and gas burning.

The wood stoves burn cleanly and efficiently with adjustable air controls. The gas stoves utilize the latest in valves, remote controls, and burn technology. In addition, Wittus has state of the art pellet stoves and biofire fireplaces. Most Wittus products are manufactured according to ISO quality standards.

**Environment** — Wittus fireplaces and stoves have been tested and meet the stringent US and Canadian standards for wood and gas burning models.

Also, the wood burning stoves are EPA certified and are environmentally clean burning.

Cozy flames, functional fashion, and ecological responsibility. That's **Wittus — Fire by Design.**
